

TK-1-K

Beachside Lighting's model TK-1-K liquid-fueled tiki torch head is a high-quality, copper and brass, self-contained fixture that burns citronella or kerosene. It is ideal for locations that cannot be accessed by natural or propane gas lines. The torch head features a removable brass wickholder to allow filling of the unit. The brass cap threads on over the wick, ensuring an untainted fuel supply even after heavy rains.

Construction Solid brass fittings. Cone and Base are 18-gauge (0.043" thick) seamless spun copper.

Installation Brass fitting at torch base threads onto 1-inch NPT male pipe threads. 1" Type K or L copper tubing with a 1" male NPT adapter soldered to one end is recommended. It is not necessary for the copper pole to be installed in concrete, but it is recommended if the torch is intended to be a permanent fixture in the landscape. Beachside manufactures and sells the torch head only.

Fuel 'Tiki torch' fuel, kerosene, or lemon-scented Citronella Outdoor Lamp Oil (available at most hardware stores)

Fuel Usage The torch body holds approximately 45 oz of fuel. Burn time averages between 10 and 14 hours.
Torch is filled from the top by unscrewing the wickholder & wick from the copper cone.

Wick Braided cotton torch wick, 1" diameter x 12" long. Replacement wicks are available from Beachside Lighting and at some hardware stores.

Ignition Manual ignition with extended lighter (by others). Wick should be no more than 1-1/2" above wick holder.

Weight:
3.3 lbs / 1.5 kg

10-year fixture warranty
